

Real-Time Productivity and Queue Management

Queue Tracker helps teams stay aligned with one shared view of work, staffing, and performance. It is designed to make daily operations easier to follow, faster to update, and safer to manage.

One shared workspace

Everyone sees the same live data, so managers and agents work from a single source of truth.

Clear daily operations

Track handlers, rosters, queue shifts, and productivity in one place without scattered spreadsheets.

Built for trust

Security, access control, and auditability are built in to keep the system reliable and accountable.

About the App

WHAT IT DOES

Queue Tracker is a practical tool for teams that need to manage daily operations, keep a record of work, and make sure everyone is looking at the same live information. It is useful for managers who want visibility and for team members who need clarity about what to do next.

For managers

See the current workload, review the roster, manage users, and make changes that update for the whole team right away.

For agents

Check your assigned shift, log daily work, and follow the live queue status without needing extra coordination.

For operations

Keep schedule changes, productivity counts, and activity logs organized so decisions are based on current data.

For teams

Reduce confusion by using one connected system instead of separate files, private notes, or repeated manual updates.

Main Features

WHAT PEOPLE CAN DO

Live updates

Changes appear immediately for connected users, so the team stays in sync.

Productivity tracking

Track incidents, tasks, and calls to understand daily performance.

Roster planning

Organize shifts, assign queue handlers, and manage custom scheduling needs.

Admin control

Review requests, manage users, and handle access in a structured way.

Audit history

Keep a clear record of important actions for transparency and review.

Easy visibility

Use a focused dashboard so critical information is easy to find at a glance.

Queue Tracker is designed to reduce manual effort and make the day feel more organized, predictable, and visible.

Why It Helps

BUSINESS VALUE

Less confusion

When changes happen in one place, everyone sees them without asking for a separate update.

Better coordination

Managers can adjust rosters and access quickly while agents continue working with the latest information.

Faster decisions

Live visibility helps teams react to queue pressure, staffing gaps, and workload spikes sooner.

More accountability

Activity tracking and audit logs make it easier to understand what changed and when.

The app turns day-to-day operations into something easier to follow, easier to manage, and easier to trust.

Security and Safety

HOW ACCESS IS PROTECTED

IDENTITY

Two-factor login

Users confirm access with an extra verification step, making accounts harder to misuse.

ACCESS

Admin approval

New users are reviewed before entry is granted, so access stays intentional and controlled.

SESSIONS

Immediate session control

Admins can end active sessions right away if a user should be removed or a login is no longer valid.

NETWORK

Protected requests

Traffic is guarded with standard protections to reduce abuse, brute-force attempts, and unsafe cross-site actions.

Data Protection

TRUST AND PRIVACY

Stored safely

Sensitive values are protected before they are saved, so private information is not left exposed in plain text.

Reviewed actions

Important changes are logged so teams can trace what happened without exposing unnecessary personal details.

Secure connections

Communication uses secure channels, helping protect information while it moves between the app and the server.

Responsible design

The app is built to be useful without oversharing data, keeping the focus on operations rather than exposure.

Queue Tracker aims to be practical for work, but careful with the information it handles.

Closing Note

THANK YOU

Queue Tracker brings queue management, productivity tracking, and team visibility together in one place. It is meant to help people work with less friction and more confidence.
